Subject: Request for RF exposure reduction and wired-first connectivity in classrooms

Dear [Name],

I am writing as a parent/guardian of a student at [School Name]. I am requesting that the district adopt practical, low-cost steps to reduce unnecessary RF exposure in learning environments, especially for children who experience continuous, long-duration exposure at school.

Requested actions:

- 1) Wired-first classrooms: Prioritize Ethernet for fixed devices and teacher workstations where feasible.
- 2) Night/weekend shutdown: Ensure Wi-Fi access points are powered down outside instructional hours when not needed.
- 3) Phone-distance education: Provide basic guidance to students and staff on keeping phones off the body and using speaker mode or wired accessories.
- 4) Placement review: Keep wireless access points away from seating areas and reduce power where coverage is sufficient.

These requests do not require taking technology away from students. They prioritize safer defaults and encourage best practices while standards and guidance continue to evolve.

Please confirm whether the district is willing to review these measures, and provide a timeline for response. I appreciate your leadership and attention to student health and learning conditions.

Sincerely,

[Your Name]
